VDO TPMS Pro Software Update – DV1-27

Dear Sir or Madam,

with this product information we would like to inform you about a new software version, which is now available via the WebTPM application. Check here [PI TPMS Tools 001 webTPM \(VDO\)](#) in „how to update the tool“.

New features and improvements:

- In July (DV1-26) we introduced the new Auto Retrieve ID function in the TPMS Pro. Now, you can read the current sensor IDs inside the ECU, store them and use them to program a set third party sensors in just a few seconds. And since the IDs are already stored in the ECU, there is no need to perform a relearn.
- This update boasts an improved the part number look up, and now includes support for Trailer TPMS and TPMS Retrofit kits.
- It has been made easier for technicians to identify indirect vehicles at a glance. When entering Make, Model, Year in the Check TPM menu, the TPMS Pro indicates if the vehicle is direct or indirect.
